

## Product Ingredients

### Supré

Lauryl Alcohol Ethoxylate	Lauryl alcohol is produced from coconut or palm oil. A very gentle surfactant cleaner and grease emulsifier.
Methyl Methoxy Butanol	An ester of Butyl alcohol, which is fermented from carbohydrates. Produces a co-solvent, cleaner and degreaser.
Sodium Polyacrylate	Lab-created synthetic polymer. Produces a soil suspending and chelating agent. Part of our phosphate replacement technology.
Sodium Gluconate	From corn-derived glucose. Part of our phosphate replacement technology, this ingredient produces a water softener, pH buffer and sequestrant.
Pine Oil	
Orange Oil	Extracted from orange skins, this oil is a natural solvent or perfume ingredient.
Extract of Clary	Used as a fragrance and fixative.
Extract of Wildwater Mint	Used for it's menthol properties and as a natural fragrance. Menthol is highly effective on greasy contaminations.
Extract of Vanilla	Acts as a deodoriser and re-odouriser. Excellent as a subtle, natural fragrance for our tropical disinfectant. Produced from alcoholic extract of <i>Vanilla planifolia</i> .
Food grade colouring	Added where the naturally developed product would be visually unappealing and for safety and identification purposes. Only those colours considered safe for all FD&C applications are used.
EDTA	Ethylenediaminetetraacetic acid - disodium salt. Prepared from acetic acid (obtained from distillation of wood), this is an extraordinarily effective antioxidant and stabiliser. Efficient as a preservative and essential in small quantities to maintain colour and consistency qualities.
